

Testimonial

We would like to confirm the successful implementation of the quality inspection system "*SMARTTECH3D position control*" designed for the inspection of headliners on a production line. The SMARTTECH inspection system was ordered by **Rhenus SCR GmbH** and was implemented in August 2017 at an automotive factory in Rüsselsheim am Main, Germany. Since the start of operation of the system we have received continuous SMARTTECH support that was professional and invaluable.

It was a project requiring comprehensive customisation and integration with our production line and the company SMARTTECH performed that task to our full satisfaction. We can strongly recommend SMARTTECH to any company requiring extensive expertise in the field of 3D scanning and integration of this type of technology on production lines.
